Spring and Fall 2015 and 2016 at Prince Mohammad bin Fahd University

Abstract:

The connection between generations has been one of the most important social bonds in many societies; in Saudi Arabia, intergenerational relationships are the foundation of the society. This purpose of this research was to discuss intergenerational relationships in modern families in the Kingdom of Saudi Arabia as seen from the perspective of adolescent grandchildren. The research team of university students collected data from a Spring 2017 survey of 202 female Saudi students at a private university in the eastern region of the country. The survey results were analyzed through the framework that intergenerational relationships benefit grandchildren. The key findings include that the structure of the extended family in this society is changing; grandparents influence grandchildren in various ways; grandchildren love their grandparents, despite some lack of communication and tensions caused by technology. The research suggests that technology could be used as a bridge to connect grandparents and grandchildren, rather than remain a barrier.

Key words: intergenerational relationships, technology, social media
